# Plant Identification List

The plant identification lists that follow are utilized for FNGLA's Horticulture and Landscape Certification Exams.

The lists are divided by type of plant based on growth habit, e.g., Trees, Shrubs, Vines, Palms and Palm-like Plants, etc. Some of the plants listed may occur in more than one category because of their usefulness in a variety of situations. However, for purposes of clarity, a given plant will only appear in one category.

The hardiness zones North (N), Central (C), and South (S) refer to the corresponding area of Florida where the plant is commonly used and can be expected to perform well, not simply survive. North Florida includes hardiness zones 8A, 8B, and portions of 9A. Central Florida includes portions of hardiness zones 9A and 9B. South Florida includes portions of hardiness zones 9B, zones 10A and 10B, and a portion of zone 11. In many cases, the same species grows in two or all three major areas within the state; these are labeled accordingly. Plants on the Bedding Plants list and Foliage, Container & Indoor Plants list are assumed to be the same for all three regions.

**Please Note:** The FCHP Plant Identification Exam is a multiple choice exam comprised of 50 plants from either North, Central or South Florida. The applicant chooses which region he or she will be tested on.

Each plant will be presented in two photos; one with a close-up view and one in the landscape. A list of 5 plant names follow the photos. Both common name and botanical name will be given. The applicant chooses the correct plant name from this list.
